

vMac - your virtual Mac

synced

Goal

- stay synchronized with the whole system
 - software
 - preferences & settings
 - data
 - security
- complete redundancy
- "one Mac" (virtually) on more than one (physical) systems

Requirements

- systems that equals hard drive capacities at least one partition that is equal
- Time Machine Software
- at least one Time Capsule (or other ext. hdd)

Options

- more than one time capsule
 - eg. one at work, one at home

Result

- working with one set of redundant data
- working at multiple workstation, at work, at home and even on the go
- work with different purposes (location/hardware specific)
